Thématiques majeures pour ITEMS

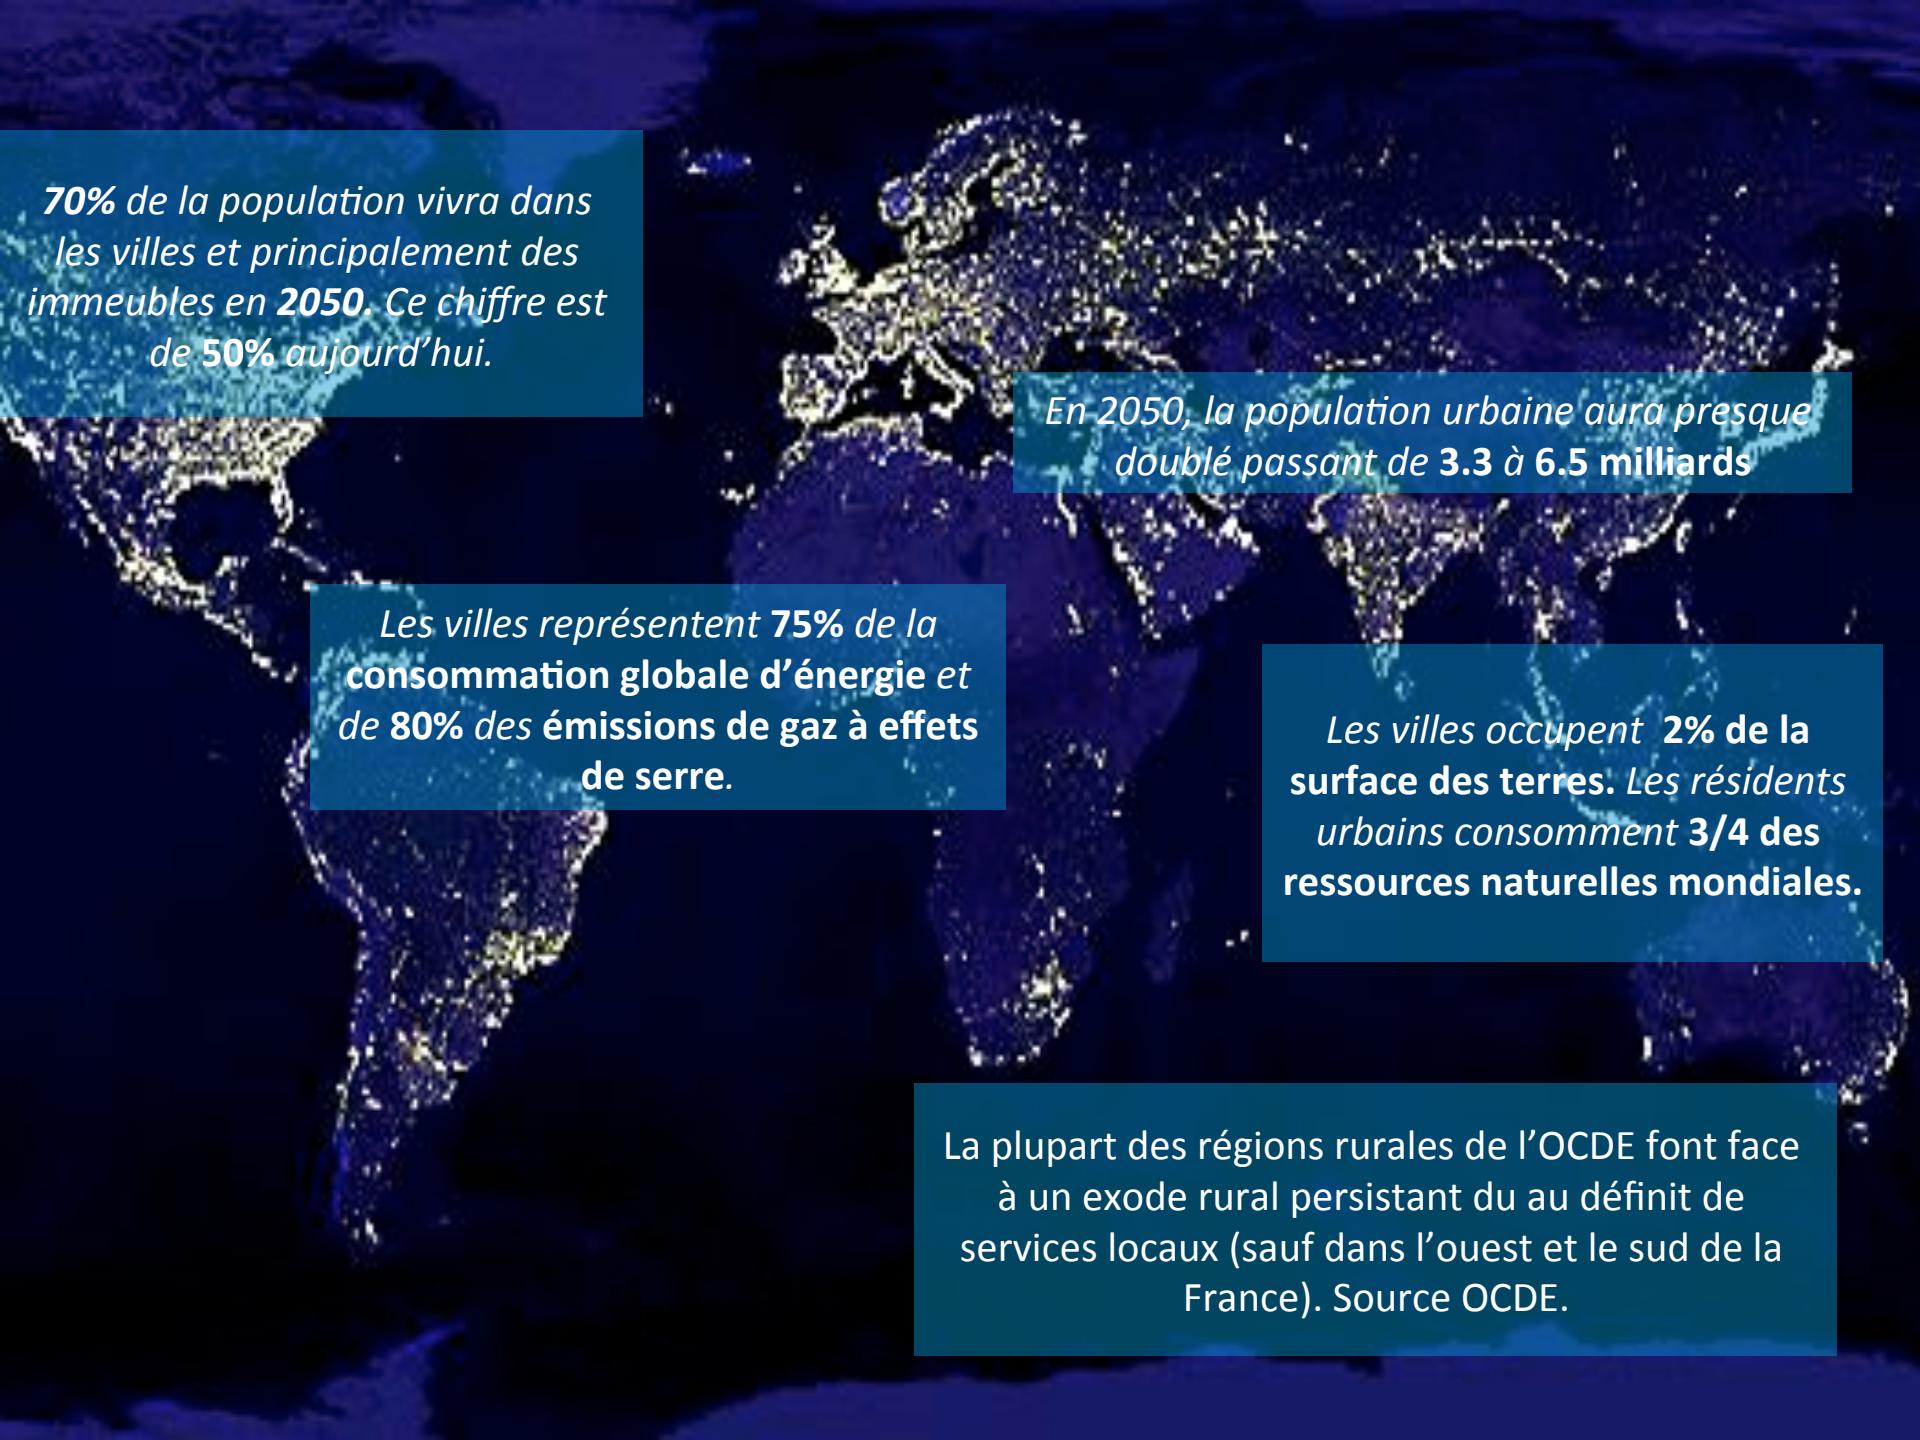

Pour les
administrations et
collectivités

A close-up photograph of a man's hands. He is wearing a light blue dress shirt, a dark blue striped tie, and a gold ring on his left hand. He is pointing his index finger at a white tablet device held in his right hand. The tablet screen displays a 3D bar chart with blue bars of varying heights. In the bottom right corner of the image, there is a semi-transparent blue rectangular box containing the text.

Pour les
entreprises

Smart Cities : Le nouveau paradigme

70% de la population vivra dans les villes et principalement des immeubles en 2050. Ce chiffre est de 50% aujourd'hui.

En 2050, la population urbaine aura presque doublé passant de 3.3 à 6.5 milliards

Les villes représentent 75% de la consommation globale d'énergie et de 80% des émissions de gaz à effets de serre.

Les villes occupent 2% de la surface des terres. Les résidents urbains consomment 3/4 des ressources naturelles mondiales.

La plupart des régions rurales de l'OCDE font face à un exode rural persistant du au déficit de services locaux (sauf dans l'ouest et le sud de la France). Source OCDE.

Painting the Town Green: Asia's Smart City Revolution

January 9, 2013

By Kourtney S. Brown

For the past 30 years, Asia has been urbanizing at a faster rate than any other region in the world. In 2011, Asia was home to roughly 61 percent of the world's population, or 4.2 billion people. More than 40 percent of them now live in urban areas. By 2025, Asia will have 21 of the world's 37 megacities; over the next 30 years, another 1.1 billion Asians are expected to move to urban centers.

Architects Must Lead The 'Smart City' Revolution

Rory Stott, ArchDaily | Apr. 9, 2013, 2:10 PM | 843 |

10 thèmes clés

#1 - Smart Grids: L'impact des énergies renouvelables décentralisées dans l'agenda des villes et territoires

Plus de 50% de l'énergie pourrait provenir des énergies renouvelables décentralisées dans plusieurs pays dans les 20 ans qui viennent. Les réseaux de distribution vont aussi devenir des réseaux de collecte. L'ensemble des réseaux vont devoir être revus et renforcés. Des investissements considérables seront nécessaires

Réseau hiérarchique

Réseau intelligent

Décentralisation signifie nécessairement une évolution des modèles économiques et une implication croissante de l'intervention des collectivités dans ces modèles.

#2: Capteurs et compteurs

Capteurs et compteurs se multiplient dans les villes (air, eau, gaz, électricité, parking, qualité de l'air, trafic ...)

- Un volume de données considérable est déjà produit et va augmenter,
- De nouveaux services apparaissent avec ces données.

Les infrastructures passives deviennent actives et induisent un nouveau mode de relation avec les gestionnaires locaux.

#3: Les immeubles intelligents : un sujet localisé pour des enjeux énergétiques majeurs

A photograph of a modern building featuring a large green roof covered in vegetation and several solar panels integrated into the structure. The building has a long, low profile with a glass facade. The sky is blue with some white clouds.

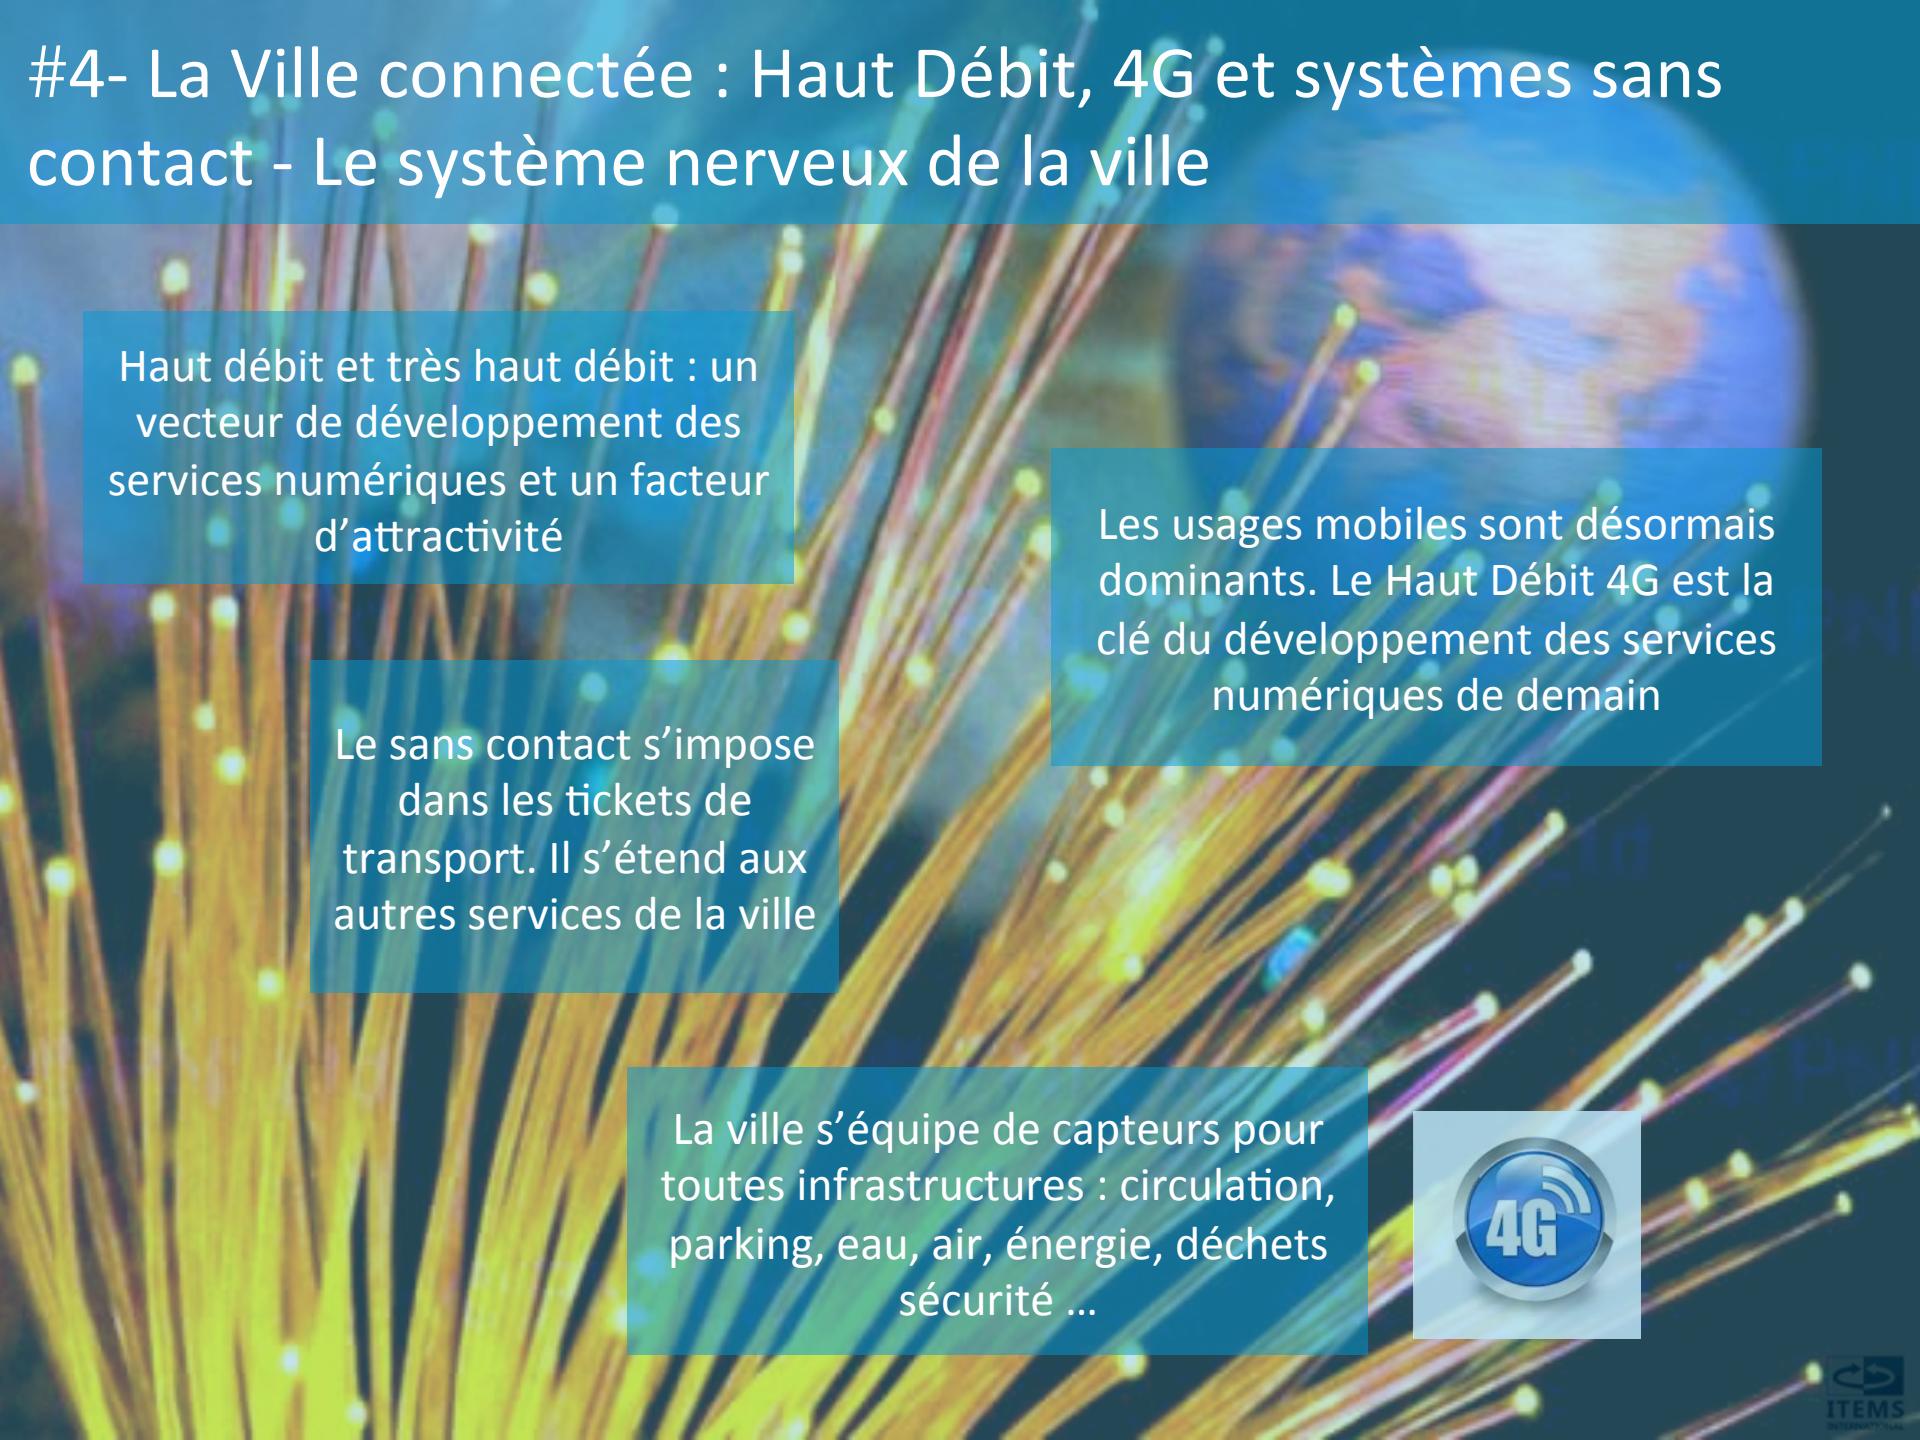

L'efficacité énergétique dans les immeubles est un enjeu colossal. Bon nombre d'immeubles pourraient diviser par 2 ou 3 leur consommation, voire par 4 ou 5.

Les immeubles concentrent un grand nombre d'usages énergétiques sur lesquels il est possible d'agir

Le lacement de nouveaux projets d'immeubles nécessitent une action auprès des aménageurs et des architectes, lesquels sont très à l'écoute sur ces questions

Les vieux immeubles dépensent 4 ou 5 fois ce qu'ils devraient consommer.

#4- La Ville connectée : Haut Débit, 4G et systèmes sans contact - Le système nerveux de la ville

Haut débit et très haut débit : un vecteur de développement des services numériques et un facteur d'attractivité

Le sans contact s'impose dans les tickets de transport. Il s'étend aux autres services de la ville

Les usages mobiles sont désormais dominants. Le Haut Débit 4G est la clé du développement des services numériques de demain

La ville s'équipe de capteurs pour toutes infrastructures : circulation, parking, eau, air, énergie, déchets sécurité ...

#6 – Les Transports intelligents

Les nouvelles technologies permettent de favoriser le développement des billets électroniques sans contact

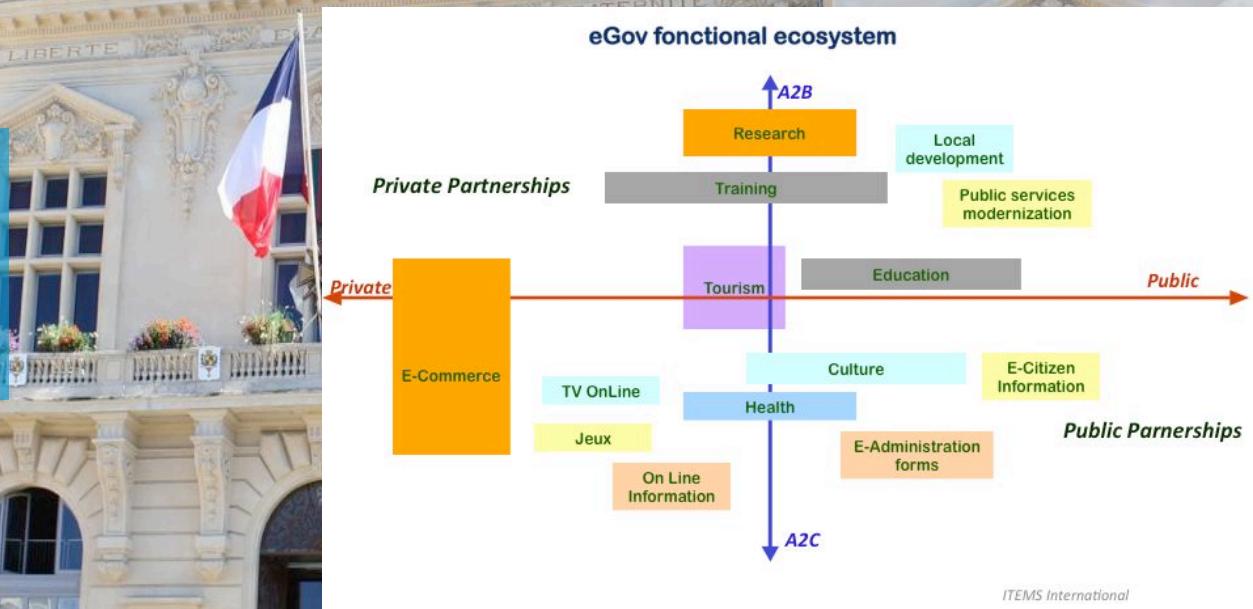

Les services numériques offrent des services qui permettent d'optimiser l'usage des transports

Les informations peuvent aujourd'hui être traitées en temps réel et être prise en compte dans la gestion temps réel du trafic

Le numérique change les relations entre la ville et les opérateurs de transports. Ces derniers vont devoir interagir de manière plus forte avec la ville et les autres acteurs

#6: Services en ligne (e-Administration)

Un changement profond qui modifie le fonctionnement en silos des collectivités

Un changement dans la relation entre les citoyens et l'administration

#7- L'environnement et la qualité de vie au cœur de la préoccupation des citoyens

Qualité de l'air

Qualité de l'eau

Intégration des données météo

Limitation des nuisances sonores

Gestion du Trafic

Les technologies numériques permettent:

- De disposer des données
- D'anticiper les risques en croisant les données
- D'informer les citoyens

#8: Les plateformes urbaines donnent à la ville la possibilité de connaître, de savoir, d'analyser et d'anticiper

Anticiper

Pouvoir prendre des décisions sur le court et long terme

Analyser

Accéder aux données de trafic et mesurer l'impact des investissements

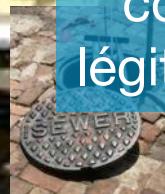

Connaître

Être informé des évènements affectant la vie des citoyens

Savoir

Connaître les infrastructures du territoire

Les données existent. Les collectivités sont légitimes à y accéder

#9 - L'interopérabilité : passage obligé pour la cohérence des investissements

Des besoins de croisement entre des services complexes:

- Systèmes d'Information Géographiques des diverses Collectivités (Villes, Départements)
- Tickets de transport sans contacts à vocation multi-usages et pouvant être intégrés dans des smartphones
- Gestion des crises (ville, services de secours ...)
- Services sans couture (seamless) aux citoyens

L'**Interopérabilité** est le vecteur incontournable à moyen et plus long terme de cohérence des investissements. Elle concerne :

- L'échange de données (systèmes de communication)
- Le format et la sémantique des données
- La coordination de certains process (workflows de gestion des perturbations, gestion des crises ...)
- L'ouverture des données (Open Data)

#10: Données : Gouvernance, propriété, accès

Faire face à la croissance exponentielle des données

Smart Cities: L'approche ITEMS

Ce qu'ITEMS Propose

1

La définition d'une VISION GLOBALE adaptée au contexte et aux objectifs de la ville

2

Une expertise sur les secteurs clés de la ville intelligente : numérique, énergie, transports

3

Une approche pragmatique qui s'appuie sur les réalités locales

4

Une assistance opérationnelle pour promouvoir la ville à l'échelle internationale

Smart City : Diversity of projects and initiatives

Maisons intelligentes

Immeubles Intelligents

Performance Energétique des bâtiments publics

Pilotage

Communications

Cloud Computing

Supervision

Services Numériques

Territoire sans contact

Gestion Intelligent des déchets

Gestion de l'eau

Sécurité

A adapter à chaque cas

La méthodologie générique

1

Définition d'une
VISION VILLE
INTELLIGENTE adaptée

2

Assistance à la définition de plans d'actions dédiés
(numérique, transport, énergie, déchets ...)

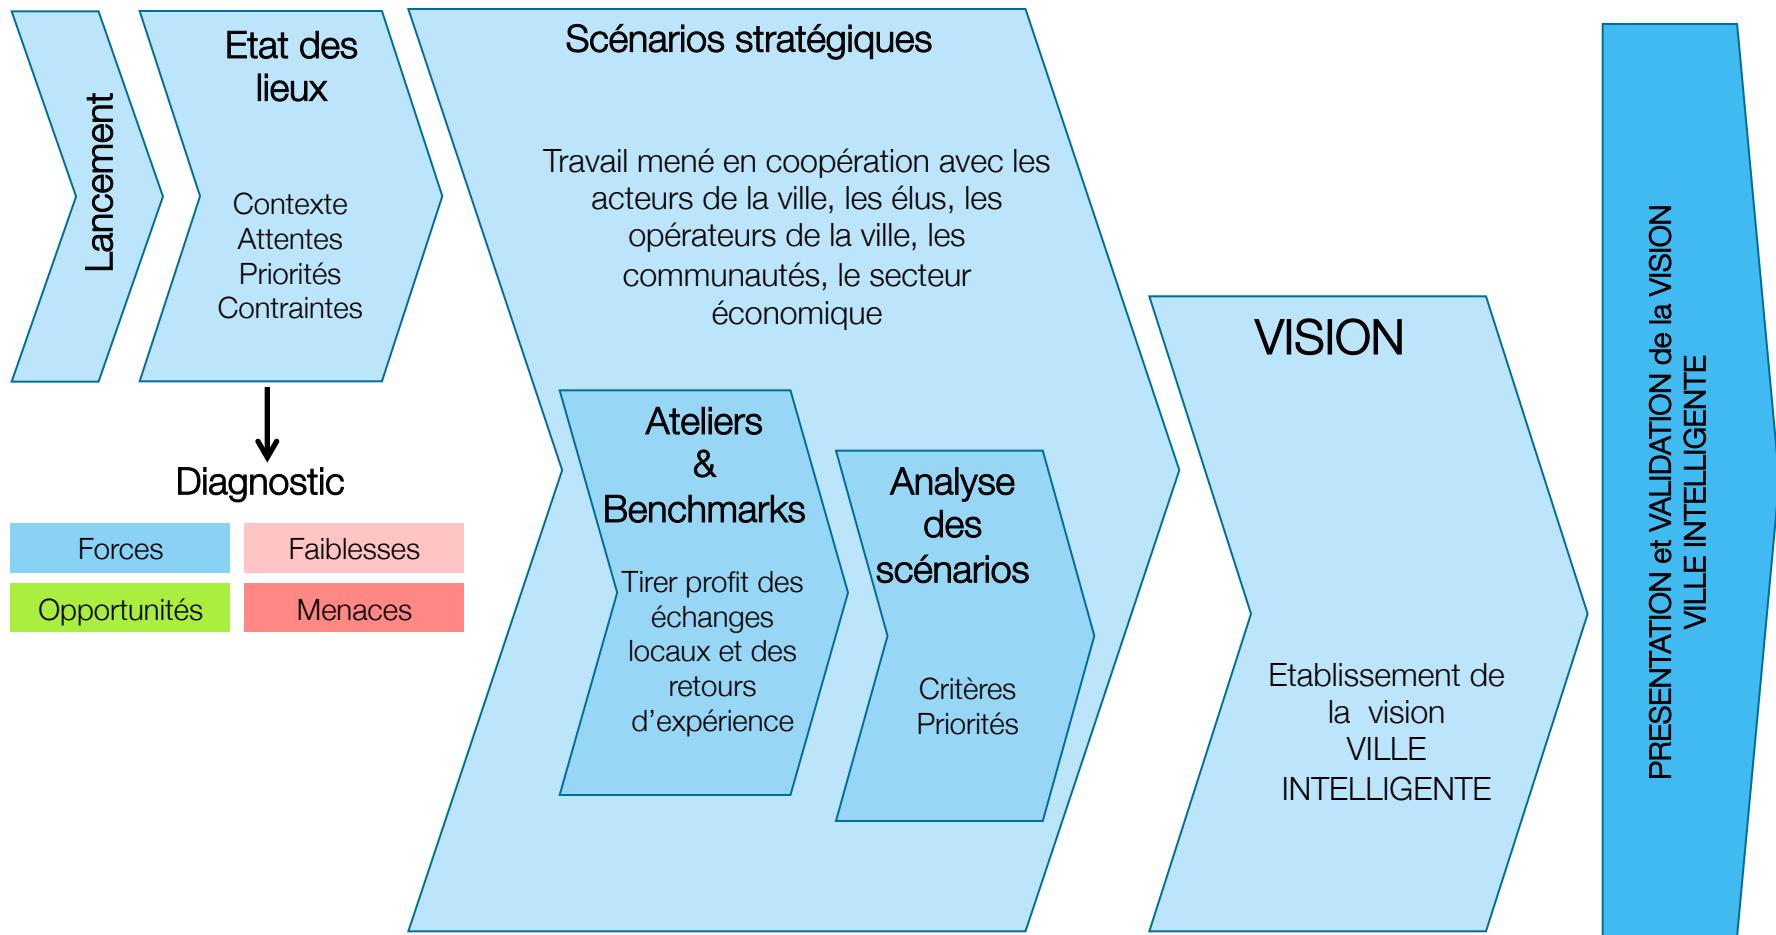

3

Accompagner la mise en oeuvre du Plan
d'Actions

4

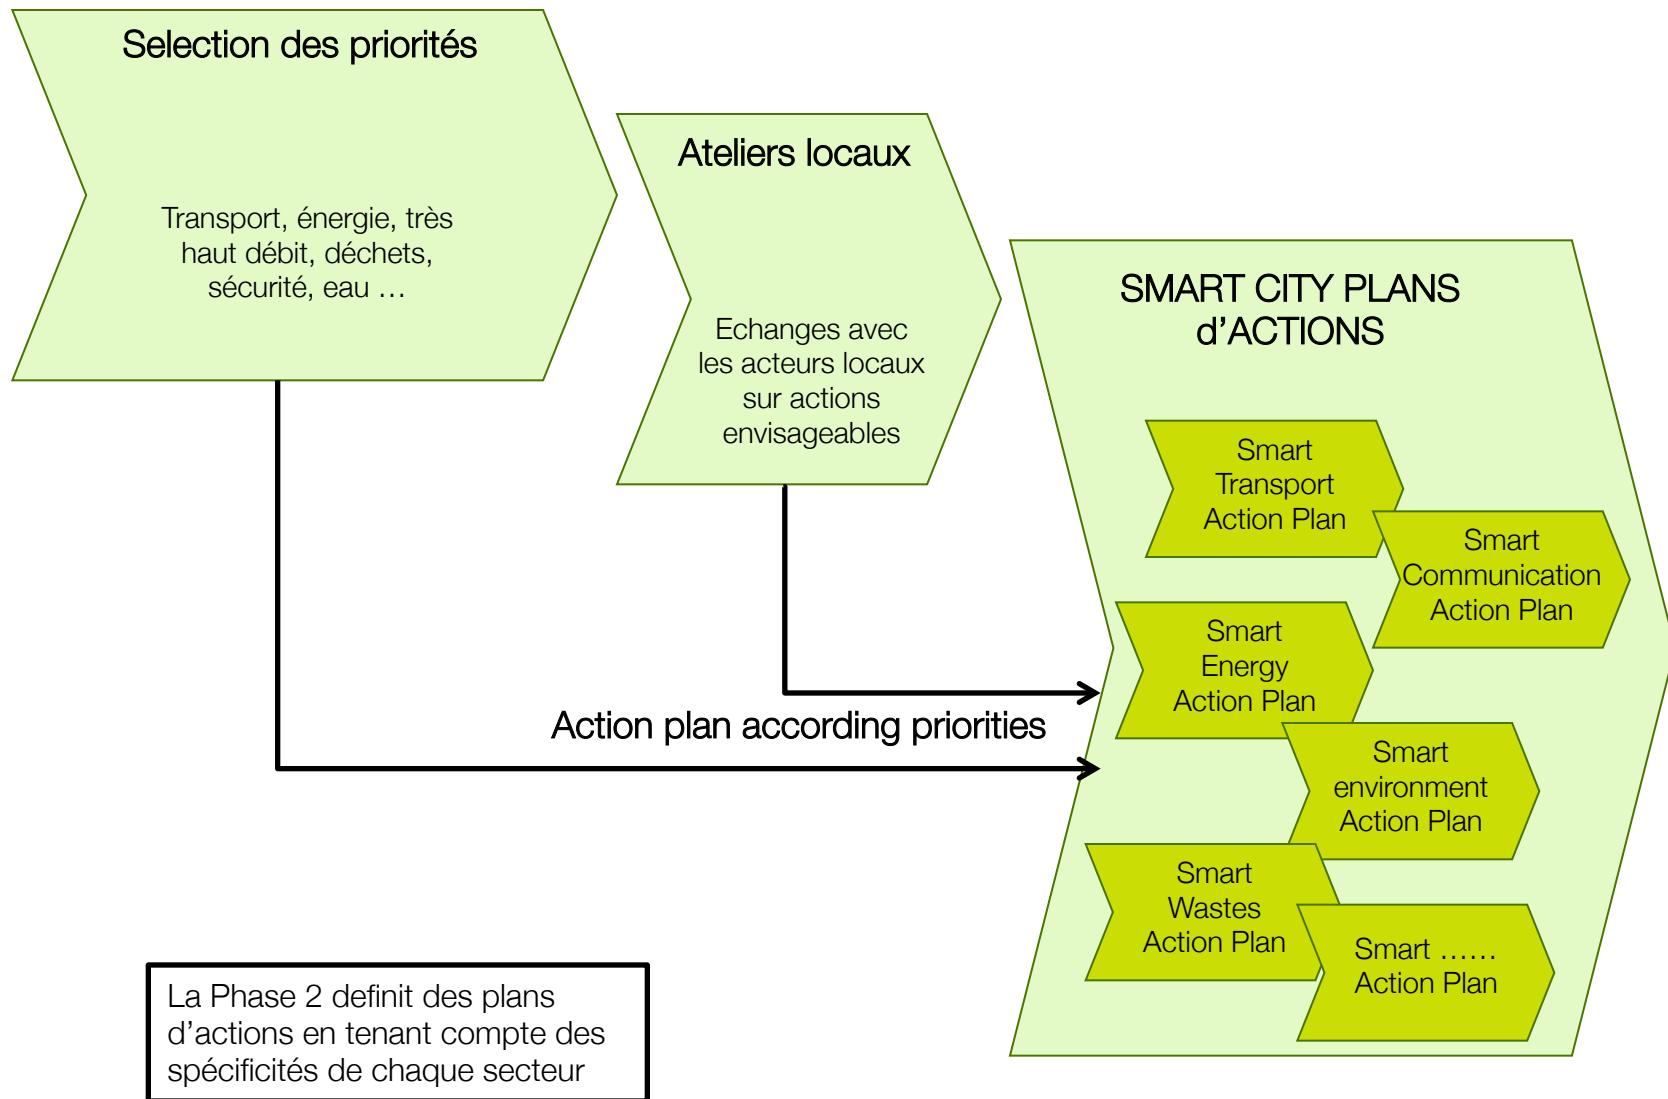

Assistance opérationnelle à la
promotion internationale de la ville

1- Assistance à la définition de la Vision Ville Intelligente

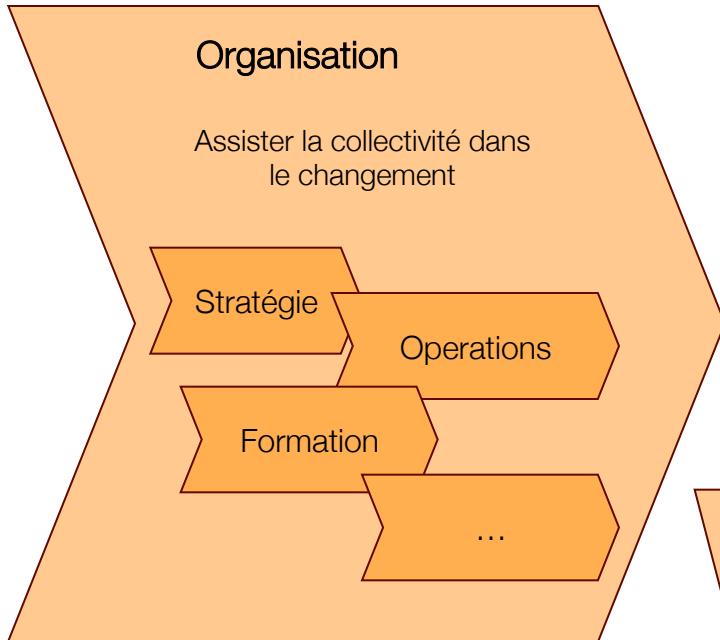

La Phase 2 établit un diagnostic et construit des scénario en relation avec les acteurs locaux. C'est une démarche itérative qui se conclut par des recommandations qui constitue la vision globale.

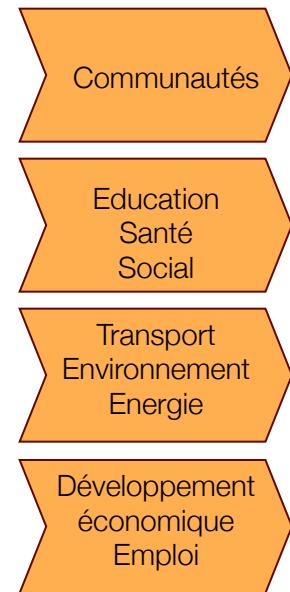

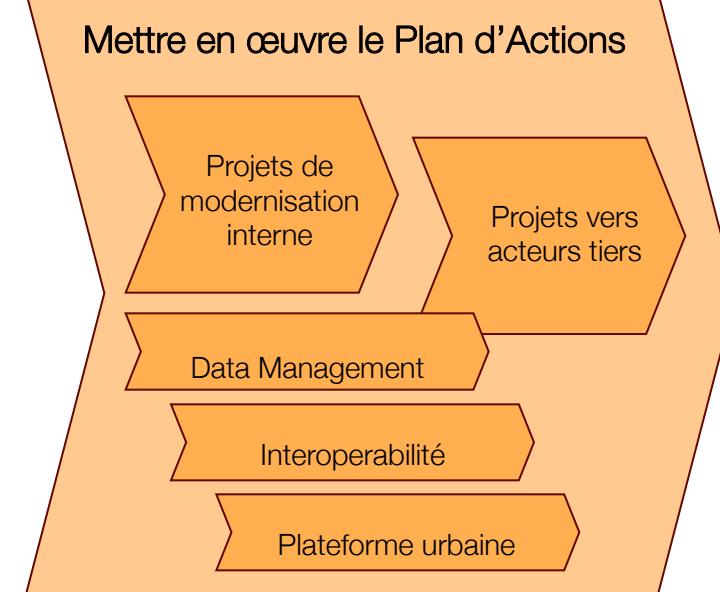

2- Faire de cette vision une réalité : PLANS D'ACTIONS

3- Mise en oeuvre du Plan d'Actions

La Phase 3 tire profit de laof Phase 1 et de la Phase 2 pour développer les projets en direction de l'administration elle-même et des acteurs tiers et des citoyens d'autre part

4 – Promouvoir la stratégie de la ville à l'échelle nationale et internationale et attirer des investisseurs

Plan d'action mensuel

Définition d'un plan d'action au mois le mois

La Phase 4 est une assistance opérationnelle à la promotion

Actions de promotion dans les conférences internationales

Organisation de visites internationales

Organisation d'événements

Actions sur les médias sociaux et la presse

4 – Promouvoir la stratégie de la ville à l'échelle nationale et internationale et attirer des investisseurs

GRANDLYON

**Strategic assistance to launch a
« Smart City » programme
(2012)**

Strategic assistance

Background

« Grand Lyon » government gathers 58 local government around the city of Lyon. They have decided to develop a common vision that is going to include Telecommunication, Mobility and Smart Grids.

Objectives

To manage a global collaborative process on these issues
To define a global vision
To propose recommendations and projects
To promote the city at the European level

Results

- Adopted by the Grand Lyon
- Lyon recognized today as a leading Smart City

Brittany Region

Smart Grids Strategy
(2013)

Background

Brittany is a Region which has to face to a strong challenge for energy due to its position at the west of France.

The Region wanted to understand the benefits of launching a Smart Grid strategy including its impact on regional policy, energy regional governance, consumer consumption, legal issues, economic models ...

In the same time, Brittany which has a strong digital industry wanted to understand how local companies and R&D could take profit of Smart Grids industry trends

Objectives

- To analyze the regional energy background and the industry and R&D landscape
- To carry out an international benchmark
- To qualify the major stakes for the Region
- To propose strategic scenarios at different levels

Results

- Strategic plan for R&D
- Creation of a Regional Agency for Energy Efficiency financed by an innovative mechanism based on economy in energy consumption
- Strategic plan for a Regional Smart Grid including:
 - Virtual Regional Plant
 - Regional Storage
 - Regional governance

Strategic assistance

Strategic study (2012-present)

The FNCCR (National Federation of Local Authorities) gathers all local French authorities which owns public infrastructures and operate service by themselves or indirectly with a public private partnership.

FNCCR is the official stakeholder representing local authorities in national debate with government about Smart Metering, broadband ...

FNCCR is facing to the increase of Smart devices, sensors and meters within the city.

Background

Stakes

- ▶ To analyze the impact of the arrival of sensors, smart metering ...
- ▶ To propose prospective scenarios
- ▶ To propose technical and legal recommendations

Public Technology Institute (Washington, DC)

« City a platform and impact on governance »
(2012-2013)

Strategic assistance

Background

Public Technology Institute actively supports local government executives and elected officials through research, education, executive-level consulting services, and national recognition programs.

PTI research and program areas include information technology and telecommunications services, energy and environment, E-government/mobile government, citizen engagement and responsive government, public safety technology, and infrastructure assurance and security..

ITEMS has been working for many years with PTI. In 2013, PTI has decided to work on Smart Cities issues with ITEMS.

Objectives

- ▶ Digital technologies are going to change the way the city interacts with citizen. The city used to be a triptic with Infrastructures, Systems and services management, Citizen and organization. Smart cities visions and technologies are to going to change this layout.
- ▶ ITEMS has to define the concept of "City a platform and impact on governance"
- ▶ Scenario and recommendations for PTI

Issy les Moulineaux, France

Strategic assistance (2009-2013)

Issy les Moulineaux is a city close to
Paris

Strategic assistance

Ambitious program to transform the city as a Smart City and to be recognized at the international level

Context

Role and Activities

- Strategic assistance
- Smart city definition assistance
- Promotion of the city at the international level
- Assistance in European Projects

Results

Issy les Moulineaux is a worldwide recognized small city
Many companies have decided to invest in Issy

Euroméditerranée Business Park

Background

Business Development Assistance (2012-en cours)

The Marseille-Euroméditerranée urban renewal and economic development project was initiated during this same time. As the largest urban renewal project in southern Europe, it commits to renovating a 480-hectare area in the heart of the City of Marseilles, between the commercial harbor, the Old Port and the TGV station.

As an economic, social and cultural development project, Euromediterranean is accelerating the process of making Marseille an attractive and influential city between Europe and the Mediterranean.

Strategy definition and operations to promote the Business Park

Objectives

To define innovative priorities
To promote Euromediterranée worldwide along these priorities

- Strategic Consulting
- Business development assistance

Effective investments of Banks and companies in High Tech
Big project with movies production major company in discussion.

European Commission / Gulf Countries

Cooperation Europe-Gulf Countries
(2011-2013)

Background

INCONET-GCC aims to develop and support the bi-regional dialogue by bringing together policy-makers and stakeholders of the GCC and EU Member States. It aims to create a dialogue and action platform to identify common interests in research areas, set up S&T priorities, support capacity building activities, and enhance the interaction between different cooperation instruments of the European Commission and EU Member States.

Objectives

- ▶ To setup a Europe-GCC network
- ▶ To define priorities in cooperation in R&D
- ▶ To develop specific and operational cooperation
- ▶ To develop cooperations with Smart Cities (Masdar, Doha, Dubai...)

Results

Strategic Roadmap including priorities in R&D in Health, Energy and Smart Cities
Common actions plan

Strategic assistance

European Commission / Open Data

Participation to Citadel on the move project
(2012-2015)

Strategic assistance

Background

Citadel on the Move aims to make it easier for citizens and application developers alike from across Europe to use Open Data to create the type of innovative mobile applications that they want and need. At present, Open Government Data is often difficult to access and use by the developer community, let alone the average citizen.

Objectives

Citadel on the Move aims to fulfill this need by:

- Creating formats that make it easier for local government to release data in usable, interoperable formats, and
- Templates that make it easier for citizens to create mobile applications that can be potentially shared across Europe creating services that can be used on any device, anytime, anywhere.

PACA Regional Council + Capenergies

Strategic assistance with local authorities on Energy Efficiency projects
(2012-2013)

Background

PACA Regional council faces a critical situation regarding Energy Infrastructure. It is due to the position of the Region within the national grid.

PACA Regional Council wants to reinforce its independence and resilience regarding Energy issues.

In parallel they want to promote initiatives launched by local authorities to improve Energy Efficiency

Objectives

Assistance to local authorities to define their needs

Project setting up:

Application to request financial support of the Region

Roll out follow up

Results

- Projects launched or followed up (> 100)

Assistance

Strategic study on Electric Roaming (2012-en cours)

The Compagnie Nationale du Rhône (CNR) is the second largest power generating company in France. The CNR has developed a set of services, in particular for Electric Vehicles. They want to propose their energy to cities, city suppliers and final users. To do so, they need new rules to be adopted. These rules would be mapped on telecommunication interconnection / roaming regulation.

Objectives

- To analyse the future of services and clearing templates in Electric Vehicles charging services
- To carry out an international benchmark
- To propose new models
- To discuss with electric power players

Results

In process

- Benchmark
- Economic study + legal + technology impact

-
- Strategic study
 - Assistance

Pau Aggomération / Total

**Strategic vision in telecommunications
and ICT economic development**
(2008-2009)

Background

Pau is the first city to have adopted a strong programme to deploy a High Broadband network.

A convention was signed in 2004 between Total Development, the City, Pau Agglomeration, the General Council and the Chamber of Commerce.

An audit has been decided before defining new perspectives and a new programme.

Objectives

TO WHOM IT MAY CONCERN

I am writing this letter as an acknowledgement to the efforts and accomplishments that Hervé Rannou has achieved in the creative planning and delivery of diverse events in the fields of Telecommunications, Software, and the Internet of Things. His active role in the annual Global Forum is well known, but Hervé has also been involved in the organisation and execution of several other conferences, seminars and workshops where his multi-faceted skills were most useful.

I have known Hervé Rannou for many years and recently had the pleasure of attending events where he was the moderator. It was in these circumstances that I was able to experience directly his hard work and dedication on issues concerning the impacts of new technologies on businesses. His ability to both listen to all sides of issues and to express his own thoughts and ideas in a relevant and precise way was greatly appreciated. More generally, I truly appreciate his devotion and his valuable role in opening brighter prospects for the understanding and deployment of the new applications and services that emerge at the confluence of ICT and Business.

I also had some occasions to appreciate his continuing support to the European Commission in promoting new scientific and technological knowledge and in developing consensus among diverse stakeholders.

It is just because the positive efforts of skilled, talented and committed people like him that we can bring together stakeholders from different perspectives and activities in the Digital Economy and reach common understandings on core principles and overarching strategies.
